ALOE VERA ... The Skin Care Studio's new line of professional products is **rich with aloe vera!** Did you know that you don't even have to have something 'wrong' with you to benefit from Aloe Vera? Whether used externally in our custom formulated skincare (or even pure Aloe Vera gel) or drinking Aloe Vera juice - it's a great tonic! If you want to look great and feel great, give Aloe Vera a good try. It's proven itself over thousands of years to be mild, non-toxic, with no known side effects.

BEESWAX ... Beeswax is made from the nectar of flowers. The honeybees produce beeswax using wax glands on the sides of their body and then create "cells" for honey storage. It smells sweet. Beeswax is an awesome emollient for the skin because it can't be washed away - it locks in hydration and increases your skin's essential moisture. You'll find beeswax in many of our moistening creams.

SAFFLOWER OIL ... Safflower Oil is high in Linoleic acid, which makes it a wonder treatment for dry skin. Interesting information about safflower oil - it's long been used to alleviate skin diseases and is a good wash for a measles rash, scarlatina and other inflammatory eruptions of the skin, including those of viral origin. Taken internally, it's an amazing anti-inflammatory, good for your heart and circulatory health and can even alleviate painful arthritis pain in joints.

MUCOPOLYSACCHARIDES ... Whew! That's a mouthful isn't it! Mucopolysaccharides are complex sugars used by the body to modulate the immune system. These substances, when combined with proteins, make up the ground substance or glue between cells. Therefore, the physical integrity of the tissues in an organ especially the degree of hydration is important to the healthy functioning of your skin. **By the way, your skin is your body's largest organ.** Mucopolysaccharides add elasticity and resiliency to skin and other connective tissues. It has been found that aging brings about a change in the amount and compositions of mucopolysaccharides in tissues and this in turn compromises the metabolic and physical properties of these tissues. The Hydrolyzed Mucopolysaccharides are a vital part of my Skin Care Studio eye cream because they hydrate and help renew your skin.

SCS Newsletter Jan/Feb 2008

In the Limelight ... SCS Eye Cream \$32

Years of experience and thousands of clients have blossomed into my very own custom formulated line of skincare. The beauty of this line - Aloe Vera. Aloe Vera restores and beautifies skin like a kiss from the fountain of youth. You'll find Aloe Vera as the first (most plentiful) ingredient in every single product!

Throughout the next several newsletters we'll teach you how amazing the ingredients in the Skin Care Studio products are - for your skin and body.

Marigold (Calendula officinalis)

MARIGOLD ... *soothes and heals!* Marigold extract both tones and soothes skin. Its anti-inflammatory and antiseptic qualities have been used for centuries to ease skin infections, ulcerations, and varicose veins. Marigold has a long history as a superior antibacterial when used internally and externally and has been used to heal many skin irritations including acne, sunburns, wounds, bee stings and injuries, including eczema, herpes, gingivitis, varicose veins, warts, and athlete's foot. If you suffer discomfort from cold sores, you might try applying marigold extract (a.k.a. calendula extract) using a Q-Tip.

SKIN CARE STUDIO'S EYE CREAM

After trying my eyecream a few days, ladies call about how excited they are! They tell me about dark under eye circles - GONE! Saggy or puffy eyes - FIRMED! Fine lines and wrinkles - SMOOTHED! My eye cream plants youth into the delicate eye tissue.
